

The **PMA2107 detector** gives an accurate measurement of non-weighted UVB+UVA ultraviolet radiation from sunlight or artificial light sources. The detector has angular response very close to an ideal cosine function (Lambertian response,) making it suitable for measurements of diffuse radiation or radiation generated by extended sources. The measured irradiance can be displayed in mW/cm^2 as well as a W/m^2 . High dynamic range allows measurements of very weak signals down to $0.001 \text{ mW}/\text{cm}^2$, as well as very strong irradiances up to (max) $200 \text{ mW}/\text{cm}^2$. The angular response of the PMA2107 sensor is cosine corrected, and suitable for measurements of diffuse radiation or radiation from extended sources.
